OVERVIEW · READ THIS FIRST

How the Seven Workflows Relate

One dashboard, one data store, seven Excel tools: the shared pattern, the links between areas, the common defects and what this means for the build

Covers	Folders 01–07 in this repository (each holds a specification and a pre-build client requirements PDF)
Organisation	Provide Wellbeing Ltd — Compliance Dashboard
Evidence	Seven Teams recordings, 11/08/2026 and 14/08/2026; figure and section references point into the folder specs
Report date	16 October 2026

In one sentence: every recording is one compliance area of the same Compliance Dashboard. Each area is prepared in its own Excel “user input tool”, and every tool ends by feeding the same data store, *Compliance Data.xlsm*, which the dashboard reads.

Contents

5. Problems Common to All Areas **7**

6. What This Means for the Build **8**

6.1 Suggested delivery order 8

6.2 Blockers across all folders 8

1. Document Map

Start here, then open the folder for the area you need. Every folder has the same two documents.

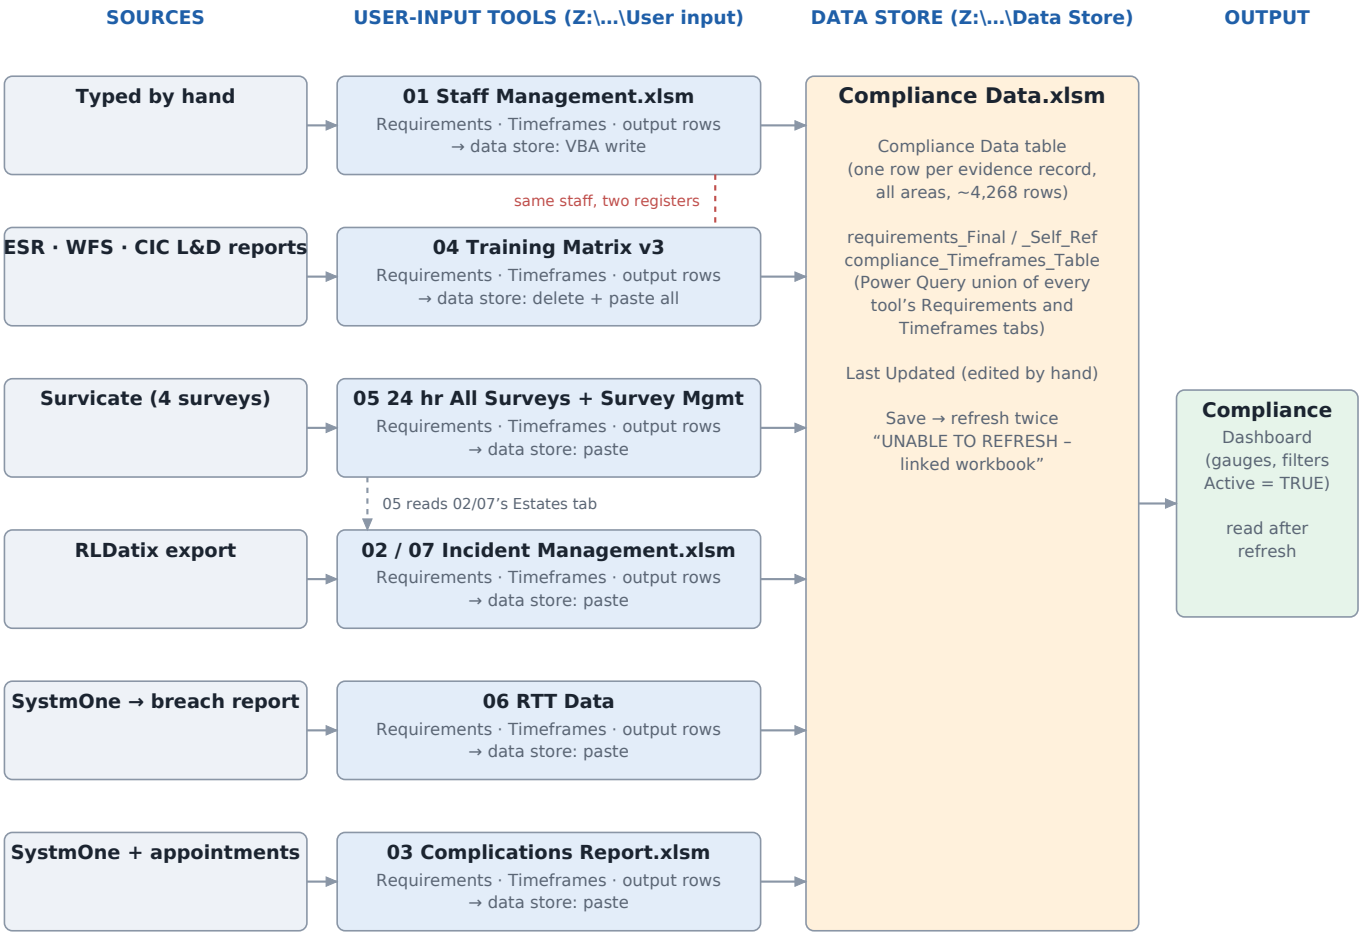

Folder	Area	Recording	Contents
01_Staff_Management	Staff Management	first/ (131142, 11/08/2026)	*_Compliance_Workflow_Specification.pdf · *_PreBuild_Client_Requirements.pdf
02_Incident_Management	Incident Management (partial)	second/ (135933, 11/08/2026)	*_Compliance_Workflow_Specification.pdf · *_PreBuild_Client_Requirements.pdf
03_Complications	Complications	third/ (120551, 14/08/2026)	*_Compliance_Workflow_Specification.pdf · *_PreBuild_Client_Requirements.pdf
04_Mandatory_Training	Mandatory Training	fourth/ (113314, 14/08/2026)	*_Compliance_Workflow_Specification.pdf · *_PreBuild_Client_Requirements.pdf
05_Survey_Feedback	Survey Feedback	fifth/ (111322, 14/08/2026)	*_Compliance_Workflow_Specification.pdf · *_PreBuild_Client_Requirements.pdf
06_RTT_Compliance	RTT Compliance	sixth/ (MEDDAD~1, 14/08/2026)	*_Compliance_Workflow_Specification.pdf · *_PreBuild_Client_Requirements.pdf
07_Incident_Management_Full_Process	Incident Management (full)	seventh/ (102641, 14/08/2026)	*_Compliance_Workflow_Specification.pdf · *_PreBuild_Client_Requirements.pdf

02 and 07 are the same tool. 02 stops at a #REF! error; 07 records the whole process and answers most of 02’s gaps (07 §0.3). Read them together.

Data store logic. Compliance_Data_Store_Logic.pdf (this folder) documents every table, Power Query step and formula of Compliance Data.xlsm from the client’s source template, with 17 findings (DS-01…DS-17). Items it adds to each pre-build checklist carry a -DS suffix.

2. System Architecture

Data flows left to right. Every tool has Requirements and Compliance Timeframes tabs (pulled into the data store by Power Query) and an output table whose rows are added to the data store's Compliance Data table.

Dashed lines: cross-tool links found in the recordings (§4).

3. The Shared Pattern

3.1 What every tool has

Element	Purpose	Seen in
Requirements tab	Who or what must comply with which compliance type (Name, Type, Required, Core, Unique Lookup, Active)	All seven
Compliance Timeframes tab	Review frequency, Compliance Group 1–4, Unique Lookup, Missing, Threshold 1–5 for the gauge colours	All seven
Output rows	Name, Compliance Type, Completion Date, Status, RAG/Issue, Notes, Managed By, Due Date, Groups 1–4, Weighting	All seven
Monthly close	Add rows to Compliance Data → edit Last Updated → save → refresh Power Query twice	All seven

3.2 Areas by dashboard group

Compliance Group 1	Area (folder)	Subject	Main source	How rows reach the store
People	Staff Management (01)	Each staff member	Typed by the operator	VBA “Add New Compliance”
People	Mandatory Training (04)	Each staff member	ESR, WFS, Provide CIC L&D reports; contractor certificates	Delete all training rows, paste all
People	Survey Feedback (05)	Provide Wellbeing	Survicate 24-hour surveys	Paste 6 rows
Operational	Incidents (02, 07)	Provide Wellbeing	RLDatix	Paste 10 rows
Operational	RTT (06)	Provide Wellbeing (10 services)	SystmOne → weekly RTT breach report	Paste 10 rows weekly
Clinical	Complications (03)	Provide Wellbeing	Appointments store + SystmOne complication codes	Paste 8 fixed rows

3.3 Recording timeline

Date	Time	Folder	Note
11/08/2026	13:11	01 Staff Management	The .srt in first/ belongs to 02
11/08/2026	13:59	02 Incidents (partial)	Stops at #REF!
14/08/2026	10:26	07 Incidents (full)	Full process
14/08/2026	≈11:00	06 RTT	8.3 file name MEDDAD~1
14/08/2026	11:13	05 Survey Feedback	
14/08/2026	11:33	04 Mandatory Training	“Only two to go now”
14/08/2026	12:05	03 Complications	“The last video, at least for now”

4. Direct Links Between Areas

Link	What it means	Evidence
02 ↔ 07 same tool	Same Incident Management.xlsm; on 11/08 the review-panel column was missing (#REF!), on 14/08 it was present	02 §4.3, 07 §0.3
01 ↔ 04 same people	Staff appear in Staff Management’s Names tab and in the Training Matrix’s All Staff List, both keyed by name text	01 §2.1, 04 §2.1
05 → 02/07	A Survey Management formula reads [Incident Management.xlsm]Estates by full path	05 §2.5
02/07 ↔ 05 shared method	Both use SPC (statistical process control) rules on monthly figures	07 §2.3, 05 §2.4
03 → “another document”	Complications requirements and timeframes come from an earlier automated version not yet seen	03 §1.1
All → Compliance Data	Data store tables hold rows from every area together (staff, Estates, RTT, Feedback, Incidents)	03 §1.3, 05/06/07 data-store figures
Other tools not recorded	The User input folder also holds Audit, Contract, Estates, Hand Hygiene/IPC, Medical Devices, Policy and Procedure, Sickness/Leave/Vacancy	02 Fig. 2, 05 Fig. 13

5. Problems Common to All Areas

These recur because one design was copied from tool to tool. Each folder’s §4 has the area-specific detail.

Problem	Areas	Effect
Name text as the only key	All	Renames, spelling variants and duplicates break or merge records
Missing column always TRUE (searches its own table)	02/07, 03, 04, 05, 06	Column carries no information
Unique Lookup with a trailing dash	02/07, 05, 06	Keys differ between tools
Unexplained constants (0.5 months, Issue 10, Weighting 1)	All except 01	“Only Matt knows”
TODAY() in rules	02/07, 04, 05, 06	Results change with the day the file is opened
Manual copy-paste into the store	02–07	Duplicates, missed periods, no audit trail
Last Updated edited by hand	All	Stale publish dates (01’s macro crashes)
“UNABLE TO REFRESH – linked workbook”	Data store	Stale lookups across tools
Logic understood by one person who left	All	Rules reconstructed or edited live (06), undocumented
Patient or personal data in shared workbooks	02/07, 03, 05, 06	IG risk; blurred in all specs

6. What This Means for the Build

Build one platform, not seven tools. The design in spec 01 §5 is the base; each folder's §5 adds its area's specifics.

Platform component	Replaces	Used by
Subject register (staff, sites, organisation) with system IDs and aliases	Names tab, All Staff List, name keys	01, 04 (and all for the organisation)
Requirements and compliance-type catalogue (versioned)	Requirements and Compliance Timeframes tabs in every tool	All
Source connectors with header contracts	Copy-paste of exports	Datix (02/07), SystmOne (03, 06), Survicate (05), ESR/WFS/L&D (04)
Rules engine: expiry, harm timeframes, RTT dates, attribution	Formulas in each tool	01, 02/07, 03, 04, 06
SPC engine with versioned parameters	SPC sheets	02/07, 05
Append-only evidence ledger + current-state views	Compliance Data table, delete-and-replace	All
Review gate and atomic publish with as-of date	Save + refresh twice, Last Updated	All
Restricted zone for patient-level data	Patient data in shared workbooks	02/07, 03, 05, 06

6.1 Suggested delivery order

Order	Area	Why
1	Platform + 01 Staff Management	Defines the subject register, catalogue and publish step everything else uses
2	04 Mandatory Training	Same people as 01; removes the delete-and-replace
3	06 RTT	Weekly, simple rule; fixes the live-edit risk
4	02/07 Incidents	Adds the Datix connector and the SPC engine
5	05 Survey Feedback	Reuses the SPC engine
6	03 Complications	Most manual; needs clinical governance decisions first

6.2 Blockers across all folders

- VBA and Power Query code for every tool, and a copy of Compliance Data.xlsm with its queries.
- Business-owner decisions on core flags, thresholds and RAG rules (they differ between tools).
- Information-governance approval for patient-level data (Incidents, Complications, RTT, Feedback).
- Recordings or walkthroughs for the tools not yet recorded (Audit, Contract, Estates, Medical Devices and others).
